EDUCATION

Ph.D. LIESMARS, Wuhan University, Wuhan, 2015.
B.Eng. School of Remote Sensing and Information Engineering, Wuhan University, 2010.

ACADEMIC APPOINTMENTS

2019– Yang Hua Young Distinguished Professor, Faculty of Geosciences and Engineering, Southwest Jiaotong University
2020–24 Associate Department Director, Faculty of Geosciences and Engineering, Southwest Jiaotong University
2015–19 Postdoctoral Fellow, Department of Land Surveying and Geo-Information, The Hong Kong Polytechnic University
2011–13 Research Assistant, Department of Land Surveying and Geo-Information, The Hong Kong Polytechnic University

RESEARCH AREAS

Oblique photogrammetry
3D Geographic Information Systems

MAJOR ACADEMIC CONTRIBUTIONS

Han Hu is a Yang Hua Young Distinguished Professor and Ph.D. supervisor at Southwest Jiaotong University. His research focuses on theories, methods, and key technologies for oblique photogrammetry and 3D Geographic Information Systems. He serves as Associate Editor of *IEEE Journal of Selected Topics in Applied Earth Observations and Remote Sensing*, International Editorial Board Member

of *The Photogrammetric Record*, and Editorial Board Member of *Engineering of Surveying and Mapping*. He has received 13 domestic and international awards, including the State Science and Technology Progress Award of China, Second Class (2021, Rank 3), the ASPRS Talbert Abrams Award (2016), and the Gold Medal of the Geneva International Exhibition of Inventions (2016). His research has directly supported major national engineering projects in China: (1) he independently developed the Link series of global DEM filtering software, filling a gap in intelligent DSM filtering for dense matching of satellite images; Link has been operationally deployed by all global DEM production units in China; (2) he independently developed OSketch, a fine 3D modeling software for oblique photogrammetry, which has been widely used in digital twin city construction in China; (3) he independently developed Planetary3D, a planetary mapping software package that supports high-resolution lunar and Martian stereo satellite images acquired worldwide and provided strong technical support for the landing-site selection of Chang'E-3 and Chang'E-4.
